

### **LibraryManagementApplication.java**

```
package com.library;

import com.library.service.BookService;
import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

public class LibraryManagementApplication {

    public static void main(String[] args) {

        ApplicationContext context =
            new ClassPathXmlApplicationContext("applicationContext.xml");

        BookService service = context.getBean("bookService", BookService.class);

        service.displayBook();
    }
}
```

### **BookRepository.java**

```
package com.library.repository;

public class BookRepository {

    public void getBook() {
        System.out.println("BookRepository: Fetching book details from the database.");
    }

}
```

### **BookService.java**

```
package com.library.service;

import com.library.repository.BookRepository;

public class BookService {

    private BookRepository bookRepository;

    public void setBookRepository(BookRepository bookRepository) {
        this.bookRepository = bookRepository;
    }

    public void displayBook() {
        System.out.println("BookService: Processing book request...");
    }
}
```

```

        bookRepository.getBook();
    }
}

```

### applicationContext.xml

```
<?xml version="1.0" encoding="UTF-8"?>
```

```

<beans xmlns="http://www.springframework.org/schema/beans"
       xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
